### **Election/Restriction**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 14-25, 29, 31-33, drawn to a nucleic acid, vector, cells and plants containing the nucleic acid, methods of transforming cells and producing plants containing the nucleic acid, methods of increasing methionine content in seeds and a method for producing plant methionine synthase, classified in class 435, subclass 320.1.
- II. Claims 26-28, drawn to a polypeptide, classified in class 530, subclass 350.
- III. Claim 30, drawn to a nucleic acid comprising a MS gene and a nucleic acid encoding a plant cystathionine  $\gamma$ -synthase or, classified in class 536, subclass 23.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the nucleic acids of Group I are unrelated to the polypeptides of Group II in terms of structure, biochemistry or function with each capable of supporting a separate patent.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In

Art Unit: 1636

the instant case the different inventions involve a nucleic acid encoding a plant MS protein (Group I) vs. a nucleic acid encoding a MS coding sequence and a sequence encoding a unrelated protein (cystathionine  $\gamma$ -synthaseor). Each of the two nucleic acid constructs is capable of supporting a separate patent.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions involve a polypeptide (Group II) and a nucleic acid construct (Group III) which are unrelated in terms of structure, biochemistry and function with each capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
